Nancy 1.0 out of 5 stars Where to start Mounting plate was so rough and uneven NOT flat, as others have noted that it literally served as a brake, preventing work piece from sliding across the surface. The countersunk leveling screws and plate screws, if adjusted properly, SHOULD keep the plate tight and level, but they don't. They vibrate loose with EVERY PASS throwing everything out of balance. Finally, the fence it will not stay square no matter how well you set it up and tighten it down. Was trying to joint boards, but the littlest bit of pressure threw the fence out of alignment every time. Trouble shot the issue eight different ways before

throwing in the towel. This was my first router table. The only positive thing I can say is that I learned a LOT about what features are essential in a good router table. Unfortunately this table has none of them. <http://sapphireglobalschool.com/userfiles/compaq-portable-iii-manual-pdf.xml>

The table is terrific and an incredible bang for your buck. My specific needs, though, were for a capable and PORTABLE router table. Regardless, I had portability to consider and a budget I wanted to stay within. My entire routing solution was as follows I purchased the Dewalt 618 router package with the fixed and plunge bases. I mounted the fixed base to this Bosch table, leaving the plunge base available for buying a second DW618 motor only for handheld routing. Then, after a lot of research, I bought the DW7440RS Rolling Table Saw Stand. I may have the worlds most portable routing setup. Haha! Anyway, it took me a lot of research to figure all of that out, but I feel those three items were a great compromise for my budget requirements. On the DW7440RS stand the Bosch RA1181 is sturdy but portable, and Ive really been enjoying it! Assembly was a breeze really. I got it mounted and running in 90 minutes. Identifying and sorting all your parts first will help. Having a ratchet with an allenhead socket will speed things along too. Although I would have preferred a full sized router table with a cabinet, my limited space made it impossible. If I told you how small my shop was, you probably wouldnt believe it. Naturally, in the process of buying something I really didnt want to buy, I did lots of research. I buy with value in mind employing a computation of price, quality, quantity, reputation and life cycle. I have NO allegiance to any brands or where any product is made. I had a chance to see and touch some of the competing models of bench top tables including Boschs other model 1171 and rejected them all for one reason or another. The numbers including a great sale price from Amazon landed me on the RA1181 with trepidation after reading many reviews and not being able to get my eyes and hands on one. I fully expected to go into this with having to do my own machine work to the top in mind.

As soon as I opened the package I went over the top with a 12 inch machinists bar and a feeler gauge. I did it again after assembly. I found no high points and the lows did not exceed 0.004. I dont know about everyone else but, thats damned near perfect and less of a variant than I know Ill experience from the materials wood Im working with. Wood, depending on how dense the species is, will expand and contract over time, humidity and temperature at least as much if not more than 0.004. If you want better than that, I would recommend prying out a few grand for a cast iron shaper. Testing by bridging the over the insert found it deadon. Thats good enough for me. I found the fence to be fine. The hardware is robust enough that they all stay put during operation and should last. I saw some complaints about the fence material. The metal extrusion is also dead on and the faces are what appears to be melamine. Good enough when you consider that they are sacrificial. Replacing them shouldnt cost much and they shouldnt really be replaced with anything other than what they are. I really like the dust extraction feature. Some bigger chips do fall underneath but, the flyable dust seems to be getting sucked up pretty well. Ill put the efficiency, conservatively, around 70%.your mileage may vary. The included shims to set up for edge jointing is a nice touch and Ive used it twice already. Works great. Speaking of nice touch, there is an outlet to support your shop vac or whatever youre using as a dust extraction system, a real time saver. No Miter Fence The track on the table is not for a Miter Fence, its for the feather boards. Everything Ive studied says that you shouldnt use a miter fence on a router table or any other tool that has a parallel, rip, oriented fence. I square up a piece of scrap and tack a guide on the end so it follows the edge of the table top. Works fine, quick and easy to do and provides a nice backup to prevent tear out.

<http://www.drupalitalia.org/node/75349>

Downers Of all the dimensions I was able to find prior to purchase, there was no mention of the base. There is a dimensional diagram on the box but, still no mention of the base bottom. I incorrectly assumed the dimension would be the same as the top. Be warned that the base, at the

mounting holes, is wider than the table top. It didn't fit the workbench I had to make in advance of receiving the tool. I wish the carriage bolts in the feather boards were a little beefier but, that's only a little annoying in initial set up of a project. Yes, the base of the table is plastic but, it's made with enough ribbing support that it's very strong. The unit doesn't rattle at all. I just wish the same theme was followed with the switch fascia. It's sort of adequately supported on one side only and feels cheesy as it deflects when operating the switch. But, it does work and we'll see if it lasts. I'll just have to discipline myself to use my fingers rather than my knuckles like I do all the rest of my tools.

Summary Other than those couple of nitpicks, I'm pleasantly surprised by the convenience and functionality of this tool and would recommend it to the smallshop woodworker without much reservation. I've done a couple of projects with it, got no surprises and it has already paid for itself in saved time and aggravation. The days of having to whack together all sorts of elaborate jigs to compensate for not having a router table are over, thank goodness. Until I bought this I was trying to get by with second hand junk. THIS table made me fall in love with my router. I have a Porter Cable plunge router that I was intimidated to use because I was trying to use it with junk. I am new to the world of tools. I use them for creative Maker projects AND for restoring my Victorian house. So I'm learning everything as I go. I love this table because it feels solidly built. I am a small woman and I like that it is sturdy enough to stay in place while being easy to move around my shop area for storage.

<http://fogeringdo.com/images/canon-powershot-sx10-is-service-manual.pdf>

Installing and removing the router is also fairly easy, you won't have to spend half a day extracting your tool to use for something else. I have only just begun to learn what I can do with my router, but I feel like my projects are coming out much nicer having good tools to work with. Initial assembly wasn't too bad. It's a bit of a puzzle. A few hours and a bottle of wine made that process feel fun. Contacted Bosch and still waiting for a response 2 months later, customer service. Currently this table is used as a talking point when I have visitors, any chance I can return this. Sorry, we failed to record your vote. Please try again There is no mention of this that I could see. That aside the actual cabinet is excellent and far superior to anything I could find here even with shipping and import costs. Sorry, we failed to record your vote. Please try again So I'm stuck with a router table without a router to mount. I would send this back but shipping would cost too much. Great! Super! Fabulous! Sorry, we failed to record your vote. Please try again El switch de la machina se descompuso despues de 3 meses de uso ligero. Ni los centros de servicio Bosch, ni Bosch Mexico se hace responsable para este producto. Solo te mandan de un lado a otro. Sorry, we failed to record your vote. Please try again I have had this table for 15 months and I am giving up on it. I have two issues that plague my usage. First, the inserts do not sit flush with the plate. This results in inevitable movement whenever a smaller piece moves across the insert. Second, the fence doesn't secure well. It is incredibly frustrating to take the time to set it just right to do a set of identical cuts on several pieces, only to be able to tell that the cut has drifted during the process. I get burned by this time and time again. Time to find a replacement. Sorry, we failed to record your vote. Please try again It did take a bit of time to put together, but everything was in the box.

<http://abqwinair.com/images/canon-powershot-sx10-is-manual-portugues.pdf>

I paired it up with a Bosch router and they fit perfectly. Some very minor cons the way the side panel connects to the blue leg is annoying. It creates a pocket where you can store small things but the panel comes off very easily from the loose slots it sits in. A bit of glue can fix that though. Also there is no cord holder underneath the table for the router so the cord just dangles underneath. Lastly it took me a lot of time to level the plate to the table for some reason. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again There are hundreds of videos on how to build your own. But I rarely have time to add another project to my all ready too long to do list. I have a Bosch router that I checked to ensure compatibility. It worked out

well. Assembly start to first test took about an hour and a bit. I make picture frames for my wifes etsy business and what I appreciate is the ability to turn my shop into an assembly line. Before I would secure each frame and router the rabbit in, then unsecure, then secure a new frame side, etc, etc. Now I have all my cut frame lengths router one after the other really quickly. We even got to adding fancy edging on the frames. It kicks up a lot of wood dust and chips so ensure you have a dust collector hooked up. Sorry, we failed to record your vote. Please try again Also I did not get any large washers to put together the fence and feather boards all my washers were the same size small and do not work with setting up the feather boards to the fence. Therefore I cannot use them at all. I will have to go out and purchase washers that will work. The table does work with my Ryobi plunge router, but it is a little off center. I think I will be purchasing the fixed Bosch router that will align better and also adjust the bit level from the table top. Other than not having the large washers I am pleased with the cabinet style router table.

I have used it several times during the week since I have purchased it. If Bosch sees this review maybe someone can send me out the correct washers so I can use the feather boards. Sorry, we failed to record your vote. Please try again Didn't want to spend all the time and money to build one. Sorry, we failed to record your vote. Please try again Installing it was a pain, and when they say don't overtighten the screws, well you can't help it if the threads have for some reason already been screwed up. My back left screw head just spun from the getgo and didn't tighten and the plate adjuster is a pain until you get it. Taking the router out from beneath to change a bit really isn't as bad as some mention on Youtube and in reviews. Just know where the Router clicks and you'll be fine. A second set of hands for this process makes it that much easier. Sorry, we failed to record your vote. Please try again Cast aluminum and plastic. Now that I've been using it I would add that the included feather boards are extremely stiff. Enough tension to hold the material often means you have to hold the stand down with one foot while feeding. I recommend screwing the stand to the floor. Homemade feather boards work much better. I'm going up to 4 stars because for the price this thing rocks. Despite the amount of work to install the router and set up the work. Sorry, we failed to record your vote. Please try again Paired with the DeWalt 618 router, this table has helped bring my ability to do quality finish woodworking to a new level. The unit is very sturdy and did not take too long to set up. Adjustments are accurate and the fence is true. I was pleased with the aluminum backing fence and the MDF face on the fence would be pretty easy to replace by just making a set of your own. I wasn't too sure about the plastic base, but it is sturdier than I would have thought. The feather boards included work well. Overall, I am glad I bought this table. Sorry, we failed to record your vote.

Please try again El ensamblaje es sencillo y la caja disminuye el ruido del router y la dispersion del aserrin y el polvo por lo que es mas comodo utilizarlo ahora. Sorry, we failed to record your vote. Please try again Definitely recommended. The aluminium table and insert were flat, it assembled easily, the extruded aluminium fence is surprisingly stout and well machined and for me it hits the sweet spot for table size and portability for taking to a job site. I don't think you can build a better table for less money especially when they are on sale. Sorry, we failed to record your vote. Please try again. Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases, or dust. Power tools create sparks which may ignite the dust or fumes. Use the correct tool for your application. The correct tool will do the job better and safer at the rate for which it is designed. Do not use tool if switch does not turn it "ON" or "OFF." Any tool that cannot be controlled with the switch is dangerous and must be repaired. Use the auxiliary bit guard when shaping material with the starter pin and piloted bits. The starter pin and bearing of the piloted bit assist in maintaining control of the workpiece. Please study them and learn their meaning. Proper

interpretation of these symbols will allow you to operate the tool better and safer. If it is NOT listed, you must purchase a BOSCH RA1 186 Router Adapter Plate, available separately. The switch power cord can now be plugged into the extension cord. Install the router bit according to the instructions included with your router. The table featherboard, combined with the fence featherboard, helps keep the workpiece pressed against the fence and tabletop. The edges should be true to the workpiece surface. You can true the edges using the router table with a straight bit. NOTE If the jointing shim is installed, remove it before proceeding.

It should be used only with bits that have pilot bearings. De telles mesures preventives de securite reduisent le risque de mise en marche accidentel de l'outil. Laissez les gardes en place.
