Book Descriptions:

Cambridge audio s90 subwoofer manual

All files are provided under strict licence and reproduction without prior permission or for financial gain is strictly prohibited. If you have additional documentation please consider donating a copy to our free archive. To purchase S90 spares or accessories, please contact the company via their website or visit an authorised retailer. Although small, the X201 packs a mighty 200W from its active amplifier and offers gain, phase and crossover control for full control and integration with a complete Minx system. This means the subwoofer doesn't require a closed box or enormous cabinet to give great bass. Instead, X201 produces a rich, deep sound despite its miniscule size and does so extremely efficiently. This results in a tighter bass and less distortion at high volumes. Enough to add a rich, deep bass to any set up. Finished in highgloss black or white, these tiny subwoofers are beautifully subtle and unobtrusive. This will allow for accurate diagnosis of any faults and ensure that all servicing is performed to Cambridge Audio Standards. For a better experience, please enable JavaScript in your browser before proceeding. It may not display this or other websites correctly. You should upgrade or use an alternative browser. I have set the volume and crossover knobs to the same points as the SFX sub and it sounds really good but I can still pinpoint where the LFE is coming from. I was wondering if I have set it up correctly and if anyone can help me out. Standard practice is to disable the crossover if possible, otherwise to set it to its highest frequency. The AVR will then handle the processing. What did you have the subs crossover set to before. If the AVRs setup is unchanged, and youre now getting directionality that you werent before, its possible that you were missing a frequency band before if the subs crossover wasnt set high enough for the AVRs, but now you have everything. <http://www.campoalegre.al.gov.br/userfiles/conteudos/dillon-550-reloading-press-manual.xml>

As for the volume on the sub, you're best off running the AVR's setup sequence as a first attempt. Then finetune it using a test tone the AVR should emit pink noise or similar on each speaker to help you set the levels. Although I am about 10 years into the whole Home Cinema thing, I am still dumbfounded by subs. How do you go about disabling a crossover on the sub. I have it set all the way clockwise which mirrors the setting from my old SFX sub however the Audyssey auto setup on my Onkyo 507 always sets the crossover as 100hz which seems wrong when the SFX speakers are rated at the lowest frequency as 140hz. In regards to the volume side of things, again I have mirrored the SFX sub setup by setting volume to 12 o'clock as it were but I don't know if this is correct. My head is mangled with all this. I have it set all the way clockwise which mirrors the setting from my old SFX sub however the Audyssey auto setup on my Onkyo 507 always sets the crossover as 100hz which seems wrong when the SFX speakers are rated at the lowest frequency as 140hz. So turning it all the way clockwise sounds like the right thing to do. From what I can see on a low-res image, does this say 120Hz. Running the AVR's calibration, or changing the level by ear or SPL meter from a test tone is the answer. Theoretically there's a 40Hz band you're missing. But if the upper bound of the crossover on the sub is 120, you'll still be missing a 20Hz band. So that's not ideal. For really small satellites like yours, you do need a sub that's designed to work with that sort of thing, as it will generally go up higher than proper subs. It will sacrifice quality, depth and volume at the lower end to do this. So turning it all the way clockwise sounds like the right thing to do. From what I can see on a low-res image, does this say 120Hz 180Hz. It probably isn't. The position on the volume dial is fairly meaningless. Running the AVR's calibration, or changing the level by ear or SPL meter from a test tone is the answer. http://designmyfence.com.au/ptexchange/resources/version050713101724/upload_files/uploads/editor/image/dillon-550b-manual.xml

I have a sound pressure meter I can use so Ill have a go with that If your speakers only go to 140Hz, then I am surprised the AVR set the crossover to 100Hz. Theoretically theres a 40Hz band youre missing. It will sacrifice quality, depth and volume at the lower end to do this. The picture I found wasnt a very good one. Given the info above, Id just run the calibration first, then set the sub level to your tastes afterwards. the calibration will overwrite the sub level, but I was just suggesting it before to get the subs dial in the right area. If the calibration sets the sub level incredibly high or low then consider changing the dial on the sub and doing it again. Join the AVForums team live on Sundays at 7pm. Finished in black with rounded edges, the S90 sub looks every bit as contemporary as the rest of the S Series. Packing a longthrow bass cone, the S90 may be discreet and compact, but it can certainly pack a punch when needed right the way down to 40Hz. Magnetic shielding within 10cm makes it easy to place and safe from interfering with magnetically recorded data. For a good looking subwoofer thats there when needed and discreet when not, the Cambridge Audio S90 is the ideal choice. Well cover your items for 6 years and give you your money back if unused. Richer Sounds also guarantees to beat web prices, and Price Beat is even valid for 7 days after purchase, so if youve seen a cheaper price, let us know, and well happily beat that price by up to 100! Products must be brand new, boxed, carry a comparable guarantee and be in stock at time of purchase. Call our Telesales team for details. Pay the balance in full before the end of the 6 months and there is no interest to pay whatsoever, just a oneoff settlement fee of 29. Subject to application, financial circumstances and borrowing history. Find out more For delivery of instore only deals, please contact your local store for more details.

Finished in black with rounded edges, the S90 sub looks every bit as contemporary as the rest of the S Series. For a good looking subwoofer thats there when needed and discreet when not, the Cambridge Audio S90 is the ideal choice. The unit its self is well built good sound quality and good features for the price, my only criticism would be that the design is now looking a little dated. But on the whole great product great sound great price. Im afraid I cannot describe the sound as the magazines do but I can say that I can tell a positive difference in the quality of the music my family play and that makes us all happy. There has been a quality issue with a part which unglued itself and provided distortion but Richer Sounds people at Leeds were excellent in the unerring great customer service they gave and rectified it. The sub has lived up to expectations and handles movies beautifully, giving a deep rich bass experience. The unit is anonymous in appearance and can be discretely placed, but theres no mistaking its presence when in use. The bass isnt super punchy its more of a great add-on to the satellites. You wont be blown away when playing bass songs but when you watch a film this will fill the room with bass on the big explosions. Very very happy with my purchase. Well cover your items for 6 years and give you your money back if unused. Under recent

legislation, we are obliged to point out that you obviously do not need to purchase an extended warranty at the same time you purchase your electrical goods and are entitled to shop around. We have been encouraging our customers to do just that for years because not only are our prices significantly cheaper than our competitors, but just look at what else we include Only if taken back to store Should you encounter a problem, just ask and you'll be provided with a unit to ensure you're not without music whilst your equipment is being fixed.

<http://www.drupalitalia.org/node/79633>

Naturally, models do change, so while we cant guarantee that it will be the same model, we do guarantee that it will have equivalent specifications. After 45 days, providing no claim has been made, you can terminate the agreement and receive a prorata refund. What's more, if you don't use our it in the 6 year period, we'll refund the cost of it. You really can't say fairer than that. Plus, if we can't fix a fault, we will give you a likeforlike replacement. Find out full details here. Richer Sounds also guarantees to beat web prices, and Price Beat is even valid for 7 days after purchase, so if youve seen a cheaper price, let us know, and well happily beat that price by up to 100! Products must be brand new, boxed, carry a comparable guarantee and be in stock at time of purchase. Call our Telesales team for details. Pay the balance in full before the end of the 6 months and there is no interest to pay whatsoever, just a oneoff settlement fee of 29. Subject to application, financial circumstances and borrowing history. The Cambridge S90 subwoofer is the perfect match for the S30 and S70 speakers. For a good looking subwoofer thats there when needed and discreet when not, the Cambridge Audio S90 is the ideal choice. The price for the goods will be as stipulated on the website at the time when you place your order, but this will need to be validated by us prior to processing your order. If there is a problem, we will inform you of the correct price and will give you the opportunity to purchase the goods at the correct price. FIXYA is a free service where unpaid volunteers try to answer questions, aimed at do it yourself repairs. FIXYA does not sell parts. No light up.any ideas please other than change adapter to new oneThen you will know.Possibly you could contact vendor as they appear to be selling an owners manual along with the device as is. Might offer to purchase simply a copy of the instructions.

The sub has both high and low level input and I have a Marantz PM6003 Amp although wont the sub be damaged if I connect to the amp as its already powered. The speakers currently go from RCA Input to Speaker out on my soundcard. ThanksIf not you will have to use the high level connection. looking at google pics of that sub I cant see the low level inputs though Your sub should of come with a high level cable, which is 1 plug at the sub end going to 2 wires. You connect 1 to each channel of the speaker outs on the back of the amp and use the high level cross over on the sub to determine what frequencies the sub is to play. So how would I go about connecting the speakers to the amp. If I leave them connected to the soundcard I would to control two volumes. Im using the onboard sound which has 7.1 sound so if I connected sub to the sub out would I be able to control volume with just the speakersSub out connection on either amp or your sound card Stereo Pre outs from your amp which looking at the rear of you amp it doesnt have So unless your soundcard has a sub out I cant see a way of hooking it up. I think its for connecting to a subout on an amp though as its not rca to 3.5mm Im guessing I need the same cable as I use for my speakers The RCA to RCA is probably for connecting to sub out on an amp as stated in the manual Looks like you could use it as a pass through as well. Add another run of cables for each channel into the sub high level in.

<http://echoploda.com/images/briggs-stratton-7hp-engine-manual.pdf>

So on the amp you would have 2 lots of cables from each channel. One going to the sub, the other your speakers as per normal. 2 Pass through From you speaker out binding posts on the amp to the sub high level input. Then another set of speaker cable from the sub high level output to your normal speakers. Daisy chaining it. Edit Just noticed your speakers are active. I take it your not even using the Marantz amp then. If you are only using the active speakers just connected to your sound card then just use the sub out on the card. You can connect it to either the left or right input, I use left.Right got it.how would the RCA to 3.5mm work though Im guessing I only have to use one volume knob on either optionRight got it.how would the RCA to 3.5mm work though Im guessing I only have to use one volume knob on either option. Click to expand. Its just I thought they were active are they notIts just I thought they were active are they not. Click to expand. Wouldnt I risk damaging them by connecting to ampWouldnt I risk damaging them by connecting to amp. Click to expand. The 2 options I gave before were for using your amp with passive speakers. So ignore them. You need to just use sub out from the sound card to left input on the sub. With regards to 2 volume controls. You could just set the speakers to as loud as you want them to possibly be, then use the volume control in windows to set the level.Reason for bringing amp is I got carried away and bought one second hand thinking I would be buying bookshelf speakers Ill hold onto it for now though might be handy for future upgrades The crossover in the subwoofer of 2.1 speakers then sorts out what is sent to the sub, and what goes to the satellite speakers. You need to connect the subwoofer to the same connection as the AV40s. A pass through RCA cable will allow you to do that; then you just set the crossover on the subwoofer.

Youll have to use the two volume controls, but theres no getting away from that with powered speakers that dont have their own subwoofer connection.From what Ive gathered I need to use a YAdapter so I can connect the sub and speakers to the same output. I assume this will work in the same way as the passthrough cableSplitters are not ideal, but as you need the subwoofer to receiver the same signal as the AV40s, cant really see many other ways of doing it. Just few light signs of use. Good, deep bass for the price and size. Not enough power to knock down walls but will shake your chair. Used but in exceptional condition. Shpock is a marketplace and classifieds platform that brings millions of private buyers and sellers across the United Kingdom together London, Brighton, Birmingham, Bristol, Manchester, Leicester and Liverpool are amongst the most active areas for second hand shopping. Something went wrong. Cambridge Audio crafted speakers that are meant for diverse usage while delivering the high volume they are known. What features can you expect with Cambridge Audio speakers. The different specifications for Cambridge Audio speakers contribute to its uses and their sound quality. These specs may include Walnut finish A frequency response of 50Hz to 22kHz 87 dB of sensitivity Magnetic shield Compact sizing With such features, these Cambridge Audio speakers can deliver a punchy yet clear sound that retains basslike qualities in the overall mix. The compact size enables you to transport the speakers with ease. The magnetic shield padding allows you to place these speakers next to devices such as a television where magnetic forces are much greater. Additionally, there is a soft dome tweeter placed in the speaker for smoother high frequencies. Woven

polyesterfibre woofers have also been included in the Cambridge Audio speakers to ensure you can hear clearly the lowend qualities of the audio. What are the connectivity options for Cambridge Audio speakers. The goldplated binding posts included with the Cambridge Audio speakers allow for the use of different types of wires, such as banana plugs and spade connectors. These bode well for situations such as home studio recording or for recreational listening.

You can also safely connect them to a tube television system and enjoy them as part of a home theatre setting. By using a preamp, you can also connect these Cambridge Audio speakers to a computer system, such as a laptop or a desktop computer. You can also connect amplifiers to instruments, such as a guitar or keyboard, to the Cambridge Audio speakers. What are some uses for Cambridge Audio speakers. You can use these Cambridge Audio speakers as part of a home theatre system when you connect them to either a television directly or a control system that dictates the sound and visuals of the home theatre. They are also useful for recording either in a bedroom setting or a professional studio. Because of its diversity in frequency delivery, using these speakers in a live performance setting for either a full band or a DJ is also highly beneficial. If youre a fan of casually listening to music or podcasts, these Cambridge Audio speakers are also quite useful. Content provided for informational purposes only.
