Keresek olyan elektronika hibás Canon S 820D nyomtatót amelynek a mechanikája tökéletesen működik, mivel az enyémnek az egyik kis fogaskerekeből egy fog kitorott így ott allandoan megakad. Ha valaki tud segíteni írjon. UdvJános Canon IP4000 bekapcs gondok Sziasztok! Csapdába estem, a saját nyomtatom adta meg magat. Egy festekpatron csere után azt kerte a nyomtató, hogy nyomjam meg az újrakezd gombot. Ezután a nyomtató kikapcsolt és képtelen vagyok újra bekapcsolni. Szétbontás után a tapon két feszültséget merek, olyan 7,6V és 8,4V körül. A tap jónak tűnik. Azt írja a szervízkegy, hogy ilyen esetekben cseréljünk tapot, vagy logic boardot, azaz a főpanelét. Akkor persze kukába megy az egész, mert azt beszerezni csak szervízen keresztül lehet, többbe kerül a leves, mint a hús.

Kérdésem Tudja-e valaki, hogy hány volttal megy ez a kácat, mert amit mertem az szerintem nül. Illetve olvastam a fórumban egy hasonló jószágról, ahol is a tap szekunder oldalán van egy tranzisztor, ami a standby üzemmódot kapcsolja. Canon Pixma MG 5250 nincs életjel. Tap jó. Power gombon nincs feszültség. Udvözletem. A nyomtatón QM37444 panel van. A tapról bejönnek a keskenyleti feszültségek a boardra. De onnan már nem jut el a power gombig. Ha valakinek lenne ötlete, hol és mi lehet a gond, szívesen venném. UdvTom Canon MP530 nem csinál semmit Udvözlet mindenkinek! A cimbem említett nyomtató nem csinál semmit a tapot ellenőriztem és jó, ha elindítom minden feszültség 16v, 24v, 32v megvannak. Van valakinek tapasztalata nyomtató javításban? Istenem is köszönöm. UdvMitu Similar manuals You can write in English language into the forum not only in Hungarian.
